A fuzzy graph G is a pair (S, μ) where S is a fuzzy subset of S and μ is a fuzzy relation on S such that $\mu(u, v) \leq \min(\mu(u), \mu(v))$. In this paper, the center problems on fuzzy graphs are studied.

fuzzy graph is the crisp graph $G = (V, E)$ with $E = \{\{i, j\} / i, j \in V, \mu_{ij}\}$. In crisp case the edge chromatic number of a graph is either Δ or $\Delta + 1$ where Δ is the maximum vertex degree. Here we define fuzzy edge chromatic number as a fuzzy number as follows:

Definition 4.1: For a fuzzy graph $G = (V, \mu)$, its edge

The journal brings together the leading-edge research on fuzzy set theory, fuzzy logic, soft computing and related topics to present original research of high quality. This perspective acknowledges the complexity of fuzzy computation as an interface between fuzzy mathematics and applications operating in parallel over different subject fields as well as the inherent characteristic of mathematical modelling.

Kauffman introduced fuzzy graphs using Zadeh's fuzzy relation. Fuzzy-graph theory is growing rapidly, with numerous applications in many domains, including networking, communication, data mining, clustering, image capturing, image segmentation, planning, and scheduling.

subgraph of $G = (V, E)$ if $v \in P$ and $(v, w) \in E$. Similarly, the fuzzy graph $H = (P, v, E)$ is called a fuzzy subgraph of $G = (V, E, \mu)$ induced by P if $P \subseteq V$, $v(x) = \mu(x)$ for all $x \in P$ and $\mu(x, y) = \mu(x, y)$ for all $x, y \in P$. For the sake of simplicity, we sometimes call H a fuzzy subgraph of G .

Let (V, μ, ν) be a fuzzy graph. We now provide two popular ways of defining the distance between a pair of vertices. One way is to define the "distance" $\text{dis}(x, y)$ between x and y as the length of the shortest strongest path between them.

Fuzzy graph theory was introduced by Rosenfeld in 1975 [44], ten years after the concept of fuzzy set first proposed [50]. This theory can represent all the systems properly due to the uncertainty or haziness of the parameters of systems.

Intuitionistic fuzzy sets are the valuable generalization of fuzzy sets. We combine complex intuitionistic fuzzy sets with the graph theory. Complex intuitionistic fuzzy graphs have many applications in database theory, expert systems, neural networks, decision making problems, GIS-based road networks, facility location problems and so on.
