The S4 is one of the hardest to find Nikon Rangefinders in the US -- it was never officially exported out of Japan. Being so hard to find, it is one of the "key" Nikon RF in terms of collectability. It was introduced in March of 1959, just a few months before the incredibly successful Nikon F which would doom the Nikon Rangefinder system.

The S4, released in March of 1959, and the S3M, which made its debut in April the following year, were both derived from product number "26FB". The S4 was positioned as a product that could compete during the trend of other companies lowering the prices of their coupled rangefinder cameras, as well as with the "performance and price" ratio of SLR cameras.

Many marine organisms and life stages lack specialized respiratory structures, like gills, and rely instead on cutaneous respiration, which they facilitate by having thin integuments. This respiratory mode may limit body size, especially if the integument also functions in support or locomotion. Pycnogonids, or sea spiders, are marine arthropods that lack gills and rely on cutaneous ...
