a very promising new semiconductor that may one day rival silicon as the material of choice for electronics. Diamond has the following important characteristics; it is resistant to radiation damage, chemically inert and biocompatible and it will become "the material" for bio-electronics, in-vivo applications, radiation detectors and high-frequency devices.

A thin film is a layer of material ranging from fractions of a nanometer to several micrometers in thickness. The controlled synthesis of materials as thin films (a process referred to as deposition) is a fundamental step in many applications. A familiar example is the household mirror, which typically has a thin metal coating on the back of a sheet of glass to form a reflective interface.

The original title was First Blood II, but Sylvester Stallone decided he wanted the series to be named after the lead character, just like the Rocky series. So he re-titled it "Rambo: First Blood Part II" so he could name the third film Rambo III (1988) instead of First Blood III.
